## SUMMARY

Highly motivated entry-level Software Engineer holding a B.S. in Computer Science with proven ability to deliver full-stack web applications using modern JavaScript frameworks like React and Node.js, and relational databases such as Postgres. Possesses practical experience developing, debugging, and deploying scalable solutions using technologies central to modern web infrastructure. Eager to leverage strong foundational knowledge in Algorithms, OOP Design Patterns, and software development lifecycle principles to contribute immediately to high-growth engineering teams.

## EDUCATION

### Bachelor of Science in Computer Science

*August 2021 - May 2024*

University Of North Carolina at Greensboro, Greensboro, NC

## TECHNICAL SKILLS

**Frontend Development:** JavaScript, Next.js, React

**Backend & Database Technologies:** Express, Node.js, Postgres, Python, REST APIs, SQL, Supabase

**Deployment & Infrastructure:** Git, Heroku, Vercel

**Software Engineering Fundamentals:** Algorithms, Data Structures, OOP Design Patterns, Software Development Life Cycle, Cryptography, Digital Image Processing, Database Management

**Other Languages:** C#, C/C++, Java

## PROJECTS

### Bookmark - Mobile Audiobook Player (current)

Developing a cross-platform mobile application utilizing .NET MAUI to ensure consistent UI/UX design across environments, showcasing proficiency in platform abstraction and dependency injection principles.

**Technologies:** .NET MAUI, C#, XAML

[Github](#)

### LingoBuddy - Full-stack Language Learning Web App

Engineered and deployed a full-stack web application featuring 3+ interactive minigames and an AI chatbot. Designed and implemented a normalized relational Postgres database schema, integrating effectively with Next.js API routes for data persistence and retrieval.

**Technologies:** React, Node.js, Next.js, Postgres, Tailwind, Heroku

[Github](#) | [Live Demo](#)

### Portfolio - Personal Website

Developed a responsive personal portfolio website to showcase technical capabilities and software projects, leveraging modern frontend tooling for optimized performance

**Technologies:** HTML, CSS, JavaScript, Tailwind, Vercel

[Github](#) | [Live Demo](#)

### **DB Project Demo - Real-Time CRUD Application**

Constructed a high-interaction CRUD application featuring real-time data synchronization powered by Supabase (Postgres backend). Implemented secure input validation and dynamic error handling within the React frontend to enhance user-first software quality.

**Technologies:** React, Node.js, Express, Postgres, Supabase, Vercel

[Github](#) | [Live Demo](#)

### **Bitboard Chess GUI**

Developed a high-performance, two-player GUI chess engine using C++, implementing complex bitboard representations for efficient move generation and state checking validation.

**Technologies:** C++, Qt
